Create a calendar widget with events as per given UX mock using javascript, bootstrap and html.

1. Create calendar with following look and feel.
2. By default it shows current month calendar.
3. When click on the date, show the event div on same page.
4. When click on plus icon then add the event in local storage and hide the event div.
5. When we click the date again, it shows stored event.
6. We can able to change months using arrow keys.
7. Design should be responsive.
8. Use only java script, html, bootstrap and jquery.

PLEASE DO NOT USE ANY JQUERY WIDGET
